# OUR TIME TOGETHER

1. What are some of the practical applications of ChatGPT to your nonprofit organization?
2. Is ChatGPT all rainbows and sunshine, or is there a dark side to this technology?
3. The murkiness of evaluating ChatGPT based on short-term and long-term goals of your nonprofit.
4. Is this the beginning or the end? What is the future of Large Language Models (LLM's) like ChatGPT in society and the nonprofit sector?

*"The Generosity Crisis is a required reading for our generation of professionals in the nonprofit sector."*  
Nonprofit Pro

“AI is the only scalable tool to help reverse the generosity crisis.”

What is your experience using ChatGPT?

general intelligence that  
benefits all of humanity

# ChatGPT

We've trained a model called ChatGPT which interacts in a conversational way. The dialogue format makes it possible for ChatGPT to answer follow-up questions, admit its mistakes, challenge incorrect premises, and reject inappropriate requests.

What is the precision location of the three remaining golden tickets?

# ChatGPT

## Examples

"Explain quantum computing in simple terms" →

"Got any creative ideas for a 10 year old's birthday?" →

"How do I make an HTTP request in Javascript?" →

## Capabilities

Remembers what user said earlier in the conversation

Allows user to provide follow-up corrections

Trained to decline inappropriate requests

## Limitations

May occasionally generate incorrect information

May occasionally produce harmful instructions or biased content

Limited knowledge of world and events after 2021

Describe the promise and perils of using ChatGPT for the nonprofit sector

According to **ChatGPT**, the promise of its technology is categorized as;

1. Automation that leads to efficiency - answer routine questions - which provides better support to stakeholders

And the perils, are:

1. Risk of spreading misinformation - could undermine credibility - TRUST
2. Potential bias of training data, creating and perpetuating stereotypes - TRUST
3. Privacy and security of donor information - everything you type into ChatGPT is stored and is used to train the model- TRUST

What are some of the practical applications of ChatGPT to your nonprofit organization?

# Ideas and examples of how to use ChatGPT during the fundraising process

# How to engineer prompts that get the best results

- 1. Define clear objectives:** Before designing prompts, it's essential to define the objectives of the language model and the specific tasks it will be used for. This will help guide the prompt engineering process and ensure that the prompts are relevant and effective.
- 2. Select relevant keywords:** Incorporating relevant keywords into prompts can help guide the language model towards generating more accurate and relevant responses. Use keyword research tools to identify relevant terms and incorporate them into prompts.

# How to engineer prompts that get the best results

**3. Use specific language:** Use clear and specific language when designing prompts to minimize ambiguity and encourage more accurate responses. Avoid overly broad or vague prompts, as these can result in less relevant or useful responses.

**4. Experiment with different prompt styles:** Try different styles of prompts, such as questions, prompts with context, and prompts with specific instructions. This can help identify the most effective style for the specific task at hand.

Is ChatGPT all rainbows and sunshine, or is there a dark side to this technology?

How do you evaluate ChatGPT based on short-term and long-term goals of your nonprofit?

Is this the beginning or the end? What is the future of Large Language Models (LLM's) like ChatGPT in society and the nonprofit sector?

# How to engineer prompts that get the best results

5. **Analyze responses:** Analyze the responses generated by the language model and use this feedback to refine prompts over time. This iterative process can help improve the quality and effectiveness of prompts.

6. **Test and iterate:** Test prompts with a variety of inputs and use the results to refine and iterate the prompts. This can help optimize the language model's performance and improve the quality of the responses generated.
